The Stinger Attachments DG Series Demolition Grapples are designed for both large and small debris. The solid bottom and wide grapple opening ensures the most capacity carried with every load. The curved side plates allow the operator to clamp onto large objects like logs and scrap while retaining smaller debris. Our demolition grapple bucket also has an added rolled insert bottom-radius support. This feature strengthens the shell and aids in easier clean out. The demolition grapple is an excellent choice for fast and efficient cleanup of scrap and debris.

PROPER BLAST REQUIRED
