- 45" Grapple Opening

OTHER CARRIER OPTIONS ALSO AVAILABLE.
PROPER BALLAST REQUIRED.

OPEN SIDE ROCK GRAPPLE BUCKET (ROG)

The skid steer open side rock grapple is the perfect attachment for sifting rock, grabbing brush, moving logs, debris cleanup, and much more. It has a 2-7/8" opening between the tines to grab the smaller rocks but still let dirt and small debris fall through. It is fitted with a 1/2" thick weld-on serrated cutting edge. The serrated cutting edge allows for easy digging of rocks and also helps to leave a very nice finish when doing the grading. It is fitted with 2 grapples that work together to independently secure uneven loads. With a large 48" grapple opening, the bucket can hold large amounts of material to ensure high productivity. Built with strong USA grade 50 steel all throughout. This ensures a high-quality product you can depend on. Grapples have large 1" greaseable pins as well. This attachment comes with hydraulic hoses and standard 1/2" flat face couplers.
